STEAM tube

Intelligent steam cleaning station

Simple and clever:

The STEAM tube – our intelligent steam cleaning station is a functional solution that efficiently masters the challenges of steam cleaning. It is designed to specifically collect particles of dirt such as wax and residual polish and protects against the loss of small, delicate parts. Thanks to controlled steam discharge, it also improves visibility during steam cleaning.

Ref. No.: 18420000

This is what makes work easy:

- Customizable steam discharge thanks to adaptable angle settings for optimal adjustment to the work area.
- Ergonomic flexibility thanks to the 360° rotatable asymmetric collection hopper.
- Flexible placement in the laboratory – including use independently of the sink – thanks to the integrated drainage nozzle that optionally collects condensate.
